

Cell Analysis Core

Thanks to a grant from the Gordon and Betty Moore Foundation and another from the California Institute for Regenerative Medicine, The Eli and Edythe Broad Center of Regeneration Medicine and Stem Cell Research at UCSF was able to acquire two FACS Aria II high-speed sorters and one FACS LSRII cell analyzer from Becton Dickinson in 2008-2009. The equipment is located in the Regeneration Medicine Building, room 911E.

Please note: As of 8/1/2013, the Parnassus Flow Cytometry Core will be assuming operational management of the Broad Center Cell Analysis and Sorting Facility. Please visit the PCCF website^[1] for specific information.
